STEPCONE-2024

STANDARD OPERATING PROCEDURE

EVENT NAME: Electric Ladder

DEPARTMENT NAME: EEE

EVENT TYPE: Spot event

REGISTRATION FEE:

200/-

PRIZE MONEY:

- 1st prize – 1500 Rupees.
- 2nd prize – 1000 Rupees

EVENT DESCRIPTION:

Electrical Ladder is an amusement and excited event consisting of electrical and electronic components. It is a 8x8 electrical ladder board.

i. Rolling the dice and uphill the ladder through various electric components and reach the End in a specified time. ii. The overall event is similar to snake and ladder but here electrical components such as resistor, inductor, capacitor, diode, transformer plays the role of snake as well as ladder.

iii. If a dice is rolled and reach on to diode with even number ,there will be a forward move, otherwise there will be a back move.

iv. If a dice is rolled and reach on to step-up transformer , then there will be a forward step of 2

v. If a dice is rolled and to move forward through the fuse have to roll die with number 4 or less than 4. vi. If a dice is rolled and reach on to battery then there will be forward move of 3 steps.

vii. If a dice is rolled and reach on to resistor then there will be a backward move of 1 step.

viii. If a dice is rolled and reach on to inductor with DC supply then there will be forward move of 2 steps.

ix. If a dice is rolled and reach on to NOT gate then there will be a inversion operation takes place based on number on dice.

x. If a dice is rolled and reach on to snacks box, then snacks will be provided.

xi. If a dice is rolled and reach on to capacitor connected to DC supply then there will be a backward move of 4 steps.

xii. If a dice is rolled and reaches on to relay then there is a chance to stop a turn of a person. xiii. If a dice is rolled and reach on to capacitor connected with the AC supply then there will be forward move of 3 steps. xiv. If a dice is rolled and reach on to transformer connected with DC supply, then there will be backward move on to box 9.

EVENT GUIDELINES:-

Rules and Regulations:

- Rolling the dice determines the number of steps to move.
- Each electrical component has specific rules associated with it:
- Diode: If landed on with an even number, move forward; else, move backward.
- Step-up Transformer: Move forward by 2 steps.
- Fuse: Move forward only if the dice roll is 4 or less.
- Battery: Move forward by 3 steps.
- Resistor: Move backward by 1 step.
- Inductor with DC supply: Move forward by 2 steps.
- NOT gate: Perform an inversion operation based on the dice number.
- Snack Block: Player receives snacks.
- Capacitor with DC supply: Move backward by 4 steps.
- Relay: The chance to stop a turn of a person.
- Capacitor with AC supply: Move forward by 3 steps.
- Transformer with DC supply: Move backward to box 9.

Winning Criteria

- The winner will be declared based on the leading position on the board.
- The winners of the round will be participated in next round.
- The final winner will be declared based on shortlisted 4 members among all the rounds.
- There will be no runner.

Certificate Policy

The winner will be awarded with a certificate.

PRIZE MONEY:

Winner will be awarded with cash prize of 1000.0

No of Participants: Individual

PLAN OF ACTION: It is a day shift event.
