Report of the Event (Electrical Ladder)
16/02/2024

The Project and Innovation Club of the Department of Electrical and Electronics Engineering organized an engaging technical event titled "Electrical Ladder" on February 16th 2024. This event attracted 28 students who participated enthusiastically, navigating through a dynamic and interactive game based on electrical concepts. In the Electrical Ladder event, participants used a die to advance through a board filled with various electrical elements like resistors, capacitors, reversible resistors, and inductors. Each move required players to apply their knowledge of electrical engineering to strategically position themselves on the board, making it both an educational and competitive experience. The goal of the event was to foster a deeper understanding of electrical components and their applications in a fun, game-like setting. The event, running from 01:00 PM to 5:00 PM, encouraged students to think critically and collaboratively while engaging in a practical application of their studies in a controlled and interactive environment. The participants demonstrated not only their technical skills but also their ability to strategize and adapt, making the event a valuable learning experience for all involved.
